

1 Improve The Delivery Of Patient Care

- Preserve the strength of the physician-patient relationship and prevent changes to current state law that would interfere in that all-important relationship.
- Maintain the integrity of Wisconsin's physician scope of practice laws and prevent the expansion of nonphysician scope of practice laws at the expense of patient health and safety.
- Preserve the current structure of Wisconsin's successful workers' compensation program and prevent the implementation of artificial price controls on health care services provided under the program.
- Support legislation and policies, like the Child Psychiatry Consultation Program, to improve care and increase access to services for Wisconsin residents with mental health needs.
- Support legislative efforts to allow patients and primary care physicians to enter into Direct Primary Care agreements.
- Promote legislation and policy decisions that take advantage of the benefits and cost-savings of the Patient Centered Medical Home model.
- Support policies that continue to provide critical, yet cost-effective health care benefits to the state's most vulnerable citizens.

2 Strengthen The Physician Workforce

- Increase state funding for primary care medicine and family practice residency programs, especially in medically underserved areas.
- Support legislative and policy efforts to encourage more primary care physicians to practice in Wisconsin.

3 Improve The Medical Liability Climate

- Preserve Wisconsin's current medical liability climate and support legislation to further improve the environment – which would benefit both patients and the physician workforce.
